

# React Assignment

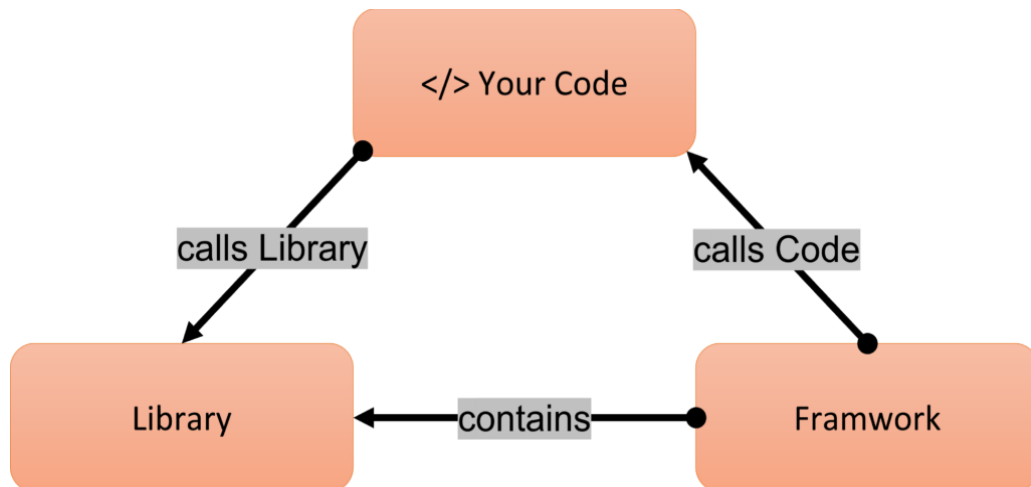

## Chapter 1 – Inception

### 1. What is emmet

- Emmet is an addon for the text editor and it allows to type shortcuts and then expand the full piece of boilerplate code.

### 2. Difference between Library and framework

- Library we need to call manually in my code.
- Framework mean it will call my code.

### 3. What is CDN? Why do we use it?

- CDN is a Content Delivery Network. It is a system of distributed servers that delivers web pages and other content to user based on geographic location.
- CDN is used to improve website performance by reducing latency and providing more reliable connection.

### 4. Why React is known as React?

- Because of its ability to react to changes in data.

### 5. What is crossorigin in script tag

- Crossorigin provides support for CORS. It allows to make request to servers which are deployed at different domain.

### 6. What is difference between React and ReactDOM

- React is used for creating views.
- ReactDOM is used to render UI in browser.

### 7. What is difference between react.development.js and react.production.js files via CDN

- react.development.js: it used for only development environment.
- react.production.js: Minified and optimized production versions of React.
